

Vijeo Citect: Editar color de alarma SOE

Vijeo Citect

Autor: Conchi Muñoz

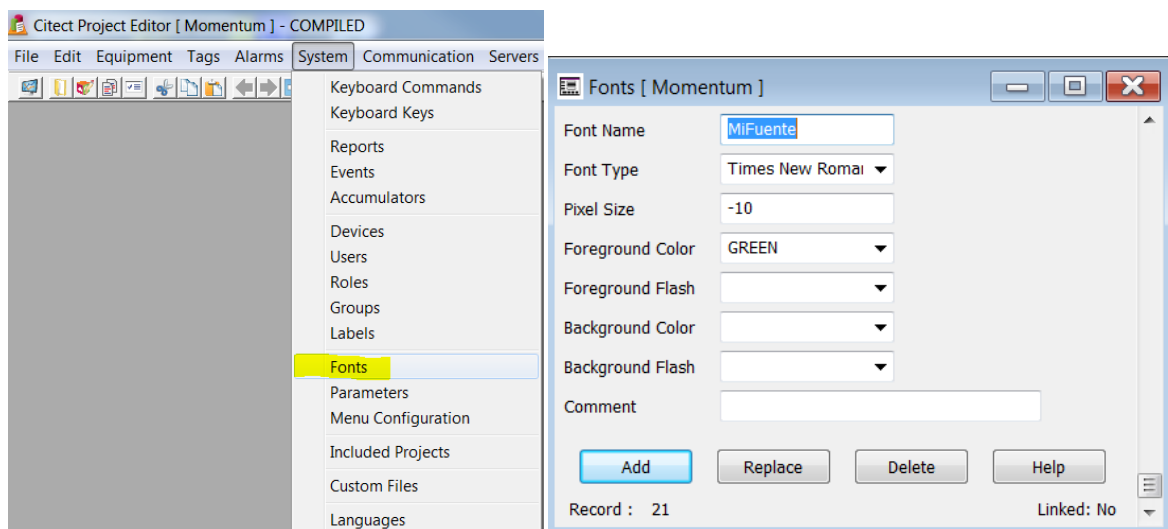

Versión

Fecha

V 1.0

20/04/16

1 – Definimos una fuente con el color y tipo de letra deseado:

En nuestro caso se llama “MiFuente”

2 - Las alarmas SOE se definen en la categoría de alarmas 0, según lo leído en la ayuda:

[Alarm]DefSOEFmt

Specifies an SOE display format to use if the display fields are not defined via the [Format] SOE parameter and the SOE Format field on the Alarm Categories properties form is blank.

If the alarm SOE formats are the same, set your alarm SOE format once using this parameter (instead of repeating the format many times in the Alarm Categories database). You would then save memory and increase the performance of your project.

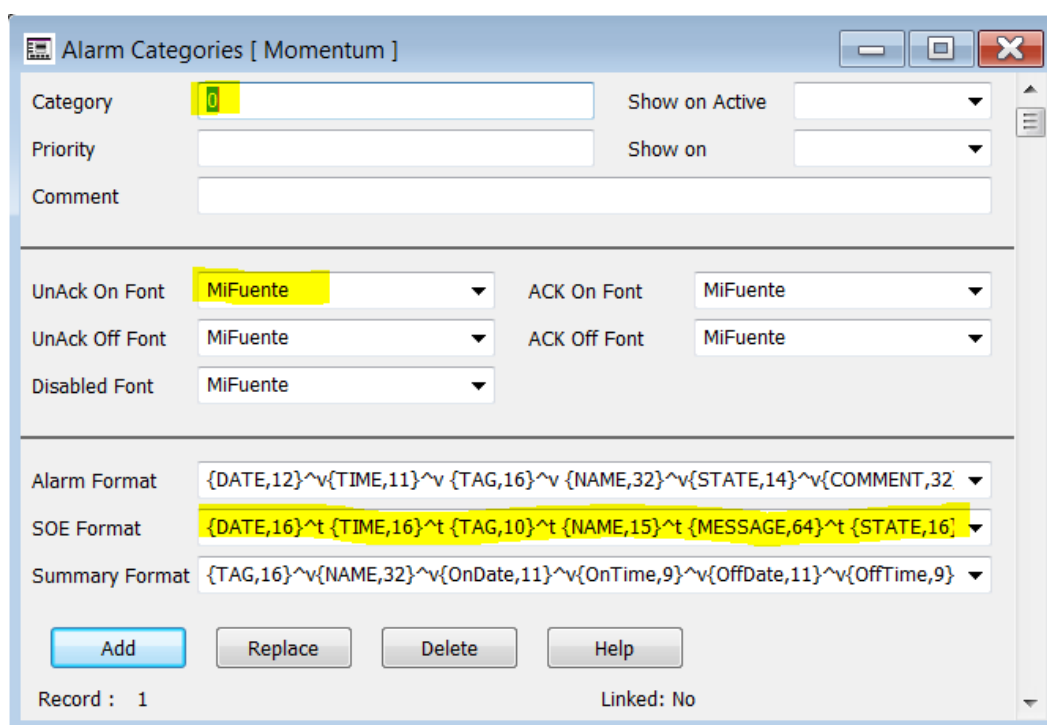

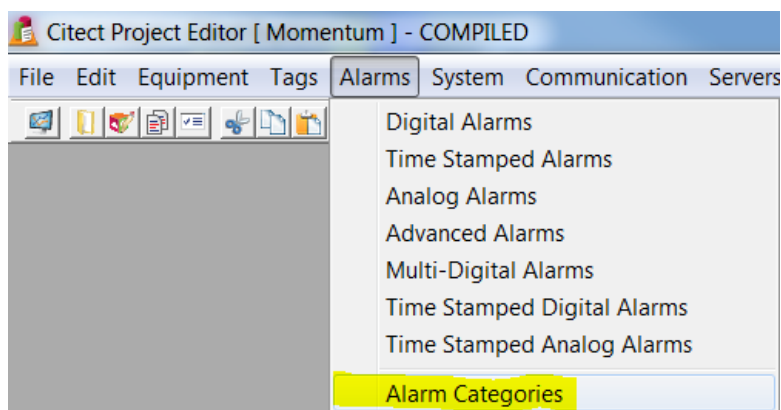

Note: You can also change the font and format of the system events on the SOE page using the SOE Format field for alarm **category 0 (zero)**.

Allowable Values: Any combination of alarm SOE fields

Default Value: {DATE,16} {TIME,16} {TAG,10} {NAME,15} {MESSAGE,64} {STATE,16} {CLASSIFICATION,13} {USERNAME,16} {USERLOCATION,16}
