

## Altivar ATV71 End of Commercialization

To whom it may concern,

Schneider Electric launched the Altivar 71 variable frequency drives in 2005, setting new industry standards for motor control performance, ease of use, and operational reliability. In 2016, the remaining variable frequency drives were released for the Altivar Process Family. Each Altivar Process model has built on the established performance set by those drives more than 10 years ago, creating new benchmarks for information management, energy efficiency monitoring, and process optimization.

The Altivar ATV71 is a general purpose drive that will be replaced on the machine side with Altivar Machine ATV340, and on the process side with Altivar Process ATV930. To facilitate the transition from ATV71 to the new offers, we have **extended the commercial life of the ATV71 480V range until 1<sup>st</sup> January 2020.**

Schneider Electric will maintain full support of these products up to the End of Commercialization date and seven years beyond. This ensures that users will continue to benefit from the reliable performance to these drives until the end of their operational lives and we assist in their migration to our more advanced Altivar Process or Altivar Machine drive ranges.
