Is there a difference between "Read from Controller" and "Save As" in The ProWORX NxT software while Online?

Applicable to Product Range(s) : ProWORX

Document Number: RESL2191

Revision: 1.0

Question	Is there a difference between "Read from Controller" and "Save As" in The ProWORX NxT software while Online?
-----------------	--

Answer	Yes, the differences are detailed below:
---------------	--

Read From Controller - This is the correct method for saving an NxT program from the controller.

Save As - This is really an Offline feature. The "Save As" feature basically copies the ladder logic and documentation and then creates a new NxT database (different name, same database). If you don't have an NxT database open Offline, then the "Save As" feature will be grayed out. If you're Online with an NxT database open and do a "Save As", you're not copying the program from the controller. You're simply copying the NxT database that's Offline and giving it a new name.
